

OSS/BSS

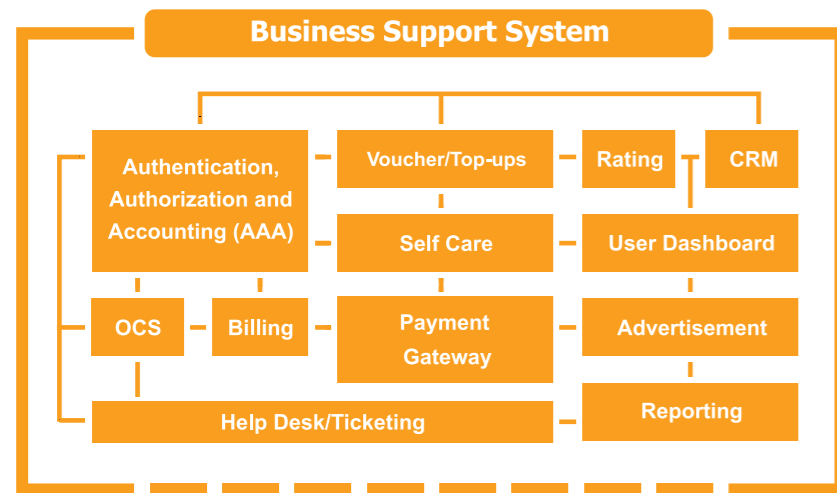

The fast growing competition between telecom companies, driven by 4G/LTE technology, makes them deliver various mobile data services to their customers in entirely new ways.

In this competitive market, MVNOs and MNOs require a convergent and flexible platform which integrates all OSS/BSS features for any prepaid, postpaid, or combined system.

'PeykAsa OSS/BSS' solution is a modular system that enables operators to deliver real-time and end-to-end services.

Consequently, it affects the CAPEX/OPEX optimization as well as the subscriber's loyalty and reduces the complexity of infrastructure.

We provide a complete BSS platform that handles subscriber information such as date of activation, top-up activities, available services and rate plans. To solve the billing and charging challenges, we also offer convergent billing and revenue management solutions.

PeykAsa MVNE platform offers a universal set of high performance tools and services that fulfill all requirements of MVNOs including the business and operational ones. Relying on its valuable experts in telecom software development, PeykAsa provides various MVNO operations such as network designing and provisioning, performance management, KPI monitoring and QoS solutions. PeykAsa is also well-known as a company that understands the Iranian telecom market and knows the related business models, so it can help MVNOs to create, assure and improve their new revenue.

Opportunities by PeykAsa's BSS/OSS Solutions Include:

- ▶ Product Management
- ▶ Revenue Management
- ▶ Online Rating and Charging
- ▶ Real-time Billing System
- ▶ Churn Prevention
